

PLUG-IN TO THE JOYS
OF HOT TUBBING™

FREEFLOW SPAS®

**RANKED #1
FOR VALUE**

In an independent survey by SpaRetailer™ Magazine, Freeflow® Spas outranked more than a dozen participating hot tub brands to earn top honors for overall product value.

Freeflow Spas are rotationally molded using polyethylene resin which creates an extremely durable, unibody hot tub.

We use high quality, industry-proven components, such as the heater and jet pump, which can be found inside other more expensive hot tub brands.

Freeflow Spas are energy efficient and offer low monthly operating costs. Each hot tub features full foam insulation, to ensure minimal heat loss. We strive to keep the water temperature high, and your energy bill low!

Our hot tubs offer a great user experience, as well as tremendous value! Independently owned and operated hot tub retailers ranked Freeflow Spas #1 in Value within its class, because our hot tubs feature items commonly found in premium spas, such as digital controls, waterfalls,

ice buckets and jets with stainless steel trim, all for a fraction of the price.

How do we do it? Rotationally molding hot tubs is more automated and less labor intensive than the process used for manufacturing traditional, acrylic hot tubs. The unibody structure of the hot tub also allows us to eliminate the heavy and expensive wooden substructure. These factors result in a more affordable hot tub.

Purchasing a hot tub from a TradeCertified manufacturer, like Freeflow Spas, means your local retailer has selected one of the most reputable spa manufacturers in North America. You can rest assured knowing that you're getting the best performing hot tub within its class.

Plug In

Save time and money with our plug-n-play technology. No additional wiring required. Simply fill up your hot tub, plug it into any standard 110v outlet, and enjoy!

Affordable

Manufactured using a rotational molding process which reduces material and labor costs, making them more affordable than traditional, acrylic hot tubs.

Portable

Renting? Moving? Or possibly redoing your backyard? No worries! Our lightweight spas can be taken with you and remain a part of your family wherever you go.

Energy Efficient

Each spa features full foam insulation to provide maximum efficiency and low monthly operating costs. Freeflow Spas are certified to the guidelines set forth by the California Energy Commission (CEC).
